

Washington State Parks and Recreation reports great results from using laser bird repellent

Andrew Fielding, environmental planner and resource steward at Washington State Parks and Recreation, currently uses laser bird repellent developed by Bird Control Group to keep his parks and beaches clean. Andrew says: "These lasers are very effective and are keeping my swim beaches and lawn areas clean. I am using this technology in pair with other types of repelling such as motorized toy boats and bird bangers at multiple park locations across Washington state and our results have been great. I'm also using the Agrilaser handheld bird repellent to repel the birds off of the water which is a huge advantage. I have found that the birds are not getting used to the green laser spot, as they do with many other types of bird repelling options."
